DAX Copilot for Epic customizable templates

ENHANCE YOUR NOTES WITH CUSTOMIZABLE TEMPLATES

Customizable templates let you personalize the AI-generated DAX Copilot SmartSections in your note. Customizable templates use a combination of text and AI prompts you can adapt to generate clinical summaries in the format you prefer.

Where to find customizable templates

 Launch DAX Copilot from the Actions menu beside any SmartSection in your note.

\odot
Actions
DAX Copilot
P DAX AI Feedback

 Select the gear icon beside the Apply my style button to open the Style section in Settings.

3. Navigate to the **Customizable template** *Format* option in the Allergies, Physical Exam, or Assessment & Plan sections.

0	 Customizable template 	
L.,	You can edit or replace the content in this suggested template.	

4. Edit the text or prompts in the default template if needed.

Components in a customizable template can include:

- Labels/Headers
- Placeholders
- Instructions
- Looping commands

Ways to apply a customizable template

Apply a single template (on demand):

- 1. Select the Note tab in DAX Copilot for Epic.
- **2.** Select the customizable template from the library icon menu beside the appropriate SmartSection to apply the template on-demand:

	+	
Physical Exam (Epic St	1005	D
Patient is in no acute distress. Throat appears normal with no	Physical Exam customizable template	

NOTES:

- Use this method to test a customizable template.
- The template does not need to be selected as the preferred SmartSection format.

WHY USE CUSTOMIZABLE TEMPLATES?

- **Efficiency:** Customizable templates can save time reviewing and editing.
- Flexibility: Use the pre-built templates as-is, modify them, or create your own version.
- **Personalization:** Tailor the templates to your personal workflow or documentation style.
- **Ease-of-use:** Apply customizable templates on-demand or automatically.

Apply as a Style preference (on demand or automatically)

1. Select **Customizable template** as the default *Format* option in the **Style** section in **Settings**.

Customizable template You can edit or replace the content in this suggested template.

2. Options:

- a. Enable **Auto-style** to apply the template and styles to every note DAX Copilot generates.
- b. Select **Apply my style** to apply templates and style preferences on demand.

DAX Copilot for Epic customizable templates

FREQUENTLY ASKED QUESTIONS

Will the customizable template feature be available in additional sections of the Summary, or will it remain limited to Allergies, Physical Exam, and Assessment and Plan? Currently, the feature is available for the Allergies, Physical Exam, and Assessment and Plan sections, but we plan to extend this functionality to other sections in future releases.

Is there a character limit for customizable templates? Each section has a character limit of 4,000. This equates to approximately 575 to 1,000 words, including spaces.

How specific must a clinician be when verbalizing content for customizable templates? For allergies, must the clinician specify "food allergy to peanut," or can the AI categorize allergies into appropriate subheadings? Our testing indicates that the AI accurately processes data corresponding to each field. It is not necessary to explicitly state "list food allergies" for the AI to categorize food allergies correctly. Users can keep the instructions within brackets straightforward. However, since the AI can make errors, users should customize the template for improved outcomes and review the content before final validation.

How many "if-then" statements can be placed within the brackets? Customizable templates utilize Generative AI, making it difficult to predict how the large language model (LLM) will perform in every scenario. We recommend keeping the instructions within the brackets simple, with a maximum of two "if-then" statements. However, you may experiment with more complex instructions to see if the results meet your expectations.

Can users have more than one customizable template per section? Currently, users can only apply one standard template per section. We are actively gathering user feedback to explore the possibility of extending this capability, which may include the option to apply different templates based on the encounter and patient diagnosis.

Do the customizable templates manage discrete data? The customizable template generates the section output in text format, following the instructions in the template, and based on the combined transcript of all recordings made with DAX Copilot. The generated content is a text, not discrete fields, and will be transferred to EHR as a text.

How do I test changes to a customizable template? Avoid applying a customizable template repeatedly to the same note. If you don't achieve the desired outcome, remove the previously applied template modifications <u>before</u> re-applying a revised version of your customizable template. To do this, either a) restore a previous note version from the *Version history*; or b) regenerate the note by adding another ambient recording (if you have not begun editing).
